 **MEDENTiKA®**
A Straumann Group Brand

MEDENTiKA® A global leader at your service.

MEDENTiKA® is there for you. We are grateful to our customers that have made us what we are, a leader in high precision, compatible, stock and custom-made abutments and components and the preferred partner for small and local and leading global laboratories and dental corporations.

we thank you for your trust

► Welcome to MEDENTiKA® <

Anyone who meets MEDENTiKA® personnel will get to know a Team. A team that since the foundation of the company collectively contributes knowledge and experience. A team that perfects products with élan. A team passionate about their work.

MEDENTiKA® has character. And it is this character that now forms the basis for morally sound handling. In a world that is becoming more and more subject to the laws which drive market forces, we feel that this position is not only right but important. What characterises MEDENTiKA® is also our belief in the power of our ideas and in the innovative strength of our products.

We are MEDENTiKA® – and if the MEDENTiKA® label is on the packet, there is more than an implant component inside: we provide you with the knowledge and experience we have been incorporating in our products since the foundation of MEDENTiKA®. We offer our customers our élan, which we use to perfect our products on a daily basis. We take this task seriously and we also embrace it with passion.

The result is that our customers receive an original implant manufactured with the highest interface precision with an extremely wide range of prosthetics. This catalogue reflects our attitude in every single product.

Our implants and prosthetic components open up new, even more diverse restoration options and provide your patients with greater comfort and increased functionality.

With this in mind: we look forward to seeing you again!

Thomas Jaberg ► Bernd Gaddum
and the entire MEDENTiKA® team

» Are there **guarantees?** «

YES, LIFET

Anyone who works with materials from MEDENTiKA® is in safe hands . MEDENTiKA® not only assumes lifetime responsibility for the quality and durability of MEDENTiKA® and MedentiCAD abutments manufactured and supplied by MEDENTiKA® but also provides a guarantee on implants of other manufacturers used with the abutment – approved by us for combination.

This extension primarily takes effect if other manufacturers limit the guarantee of their implant because it has been combined with an abutment from MEDENTiKA®.

MEDENTiKA® PRODUCTS INCLUDED

» CoCr abutments for casting on with non-precious metal «

The new CoCr abutments from MEDENTiKA® open up new, efficient treatment options. You can simply and cost-effectively cast on non-precious-metal alloys*. The abutments are available for all conventional implant systems.

- For compensating axis divergences
- For free contouring with a difficult implant position
- For simple, optimised fabrication of non-precious-metal telescope crowns
- For retaining dentures and removable bridges

Cross section through a CoCr abutment after casting on with a non-precious-metal alloy.

Homogeneous metal structure and no junctions between the CoCr abutment and cast-on non-precious-metal alloy.

* Liquidus temperature up to 1420°C

TWO DESIGNS

(indexed and rotating)
allowing fabrication of both
single-tooth and multi-unit
restorations.

BURNOUT PLASTIC SLEEVE

Polycarbonate (PC)

CAST-ON BASE

Cobalt (Co) 67%
Chrome (Cr) 28%
Molybdenum (Mo) 5%
Carbon (C), Silicon (Si),
Manganese (Mn), Iron (Fe) and
Nitrogen (N) < 1%

CTE:

14.1 10-6K-1 (25-500°C)

The ceramic veneer can be applied near the margin of the abutment thanks to the CoCr abutment and cast-on non-precious metal having the same CTE: the liquidus temperature of the CoCr cast-on alloy should not exceed 1420°C to avoid melting the CoCr base.

» MEDENTiKA® Novaloc Matrix system «

ADLC Surface

The surface quality of the ADLC coating (amorphous diamond-like carbon) sets new standards. Maximum hardness in combination with optimum sliding characteristics reduces abrasion on the abutment and damage to the retention insert.

Screw head opening

The small screw head opening of the straight Novaloc abutment reduces food packing.

Gingival heights

The straight Novaloc abutments are available in 5 different gingival heights.

Placement instrument

The straight Novaloc abutments can be inserted using the respective original placement instrument of the corresponding implant system.

Divergence compensation

In combination with the angled Novaloc abutments you can compensate for divergences of up to 70° between the implants.

ADLC Surface

The surface quality of the ADLC coating (amorphous diamond-like carbon) sets new standards. Maximum hardness in combination with optimum sliding characteristics reduces abrasion on the abutment and damage to the retention insert.

Gingival heights

The angled Novaloc Abutments are available in 5 different gingival heights.

Angulation

Angulation of the abutments 15°.

Placement instrument

All angled Novaloc abutments are inserted using the Ball-Torx placement instrument (M 03-8 or M 10-8), guaranteeing reliable force transfer.

» MEDENTiKA® Optiloc Matrix system «

ADLC Surface

The surface quality of the ADLC coating (amorphous diamond-like carbon) sets new standards. Maximum hardness in combination with optimum sliding characteristics reduces abrasion on the abutment and damage to the retention insert.

Minimum size

Slimmer than the market leader, more retentive than ball attachments. Optimum dimensions now also allow the matrix to be placed where only minimum space is available.

Gingival heights

The Optiloc abutments are available in 5 different gingival heights.

Closed surface

The Optiloc abutment does not require a screw opening thanks to the cleverly designed placement instrument. This completely prevents accumulation of food particles in this area.

Placement instrument

All Optiloc abutments are inserted using the Optiloc (M 59) placement instrument.

The clever, patented Optiloc system technology guarantees optimum fixation, even with restorations on only 2 implants.

Freedom of movement

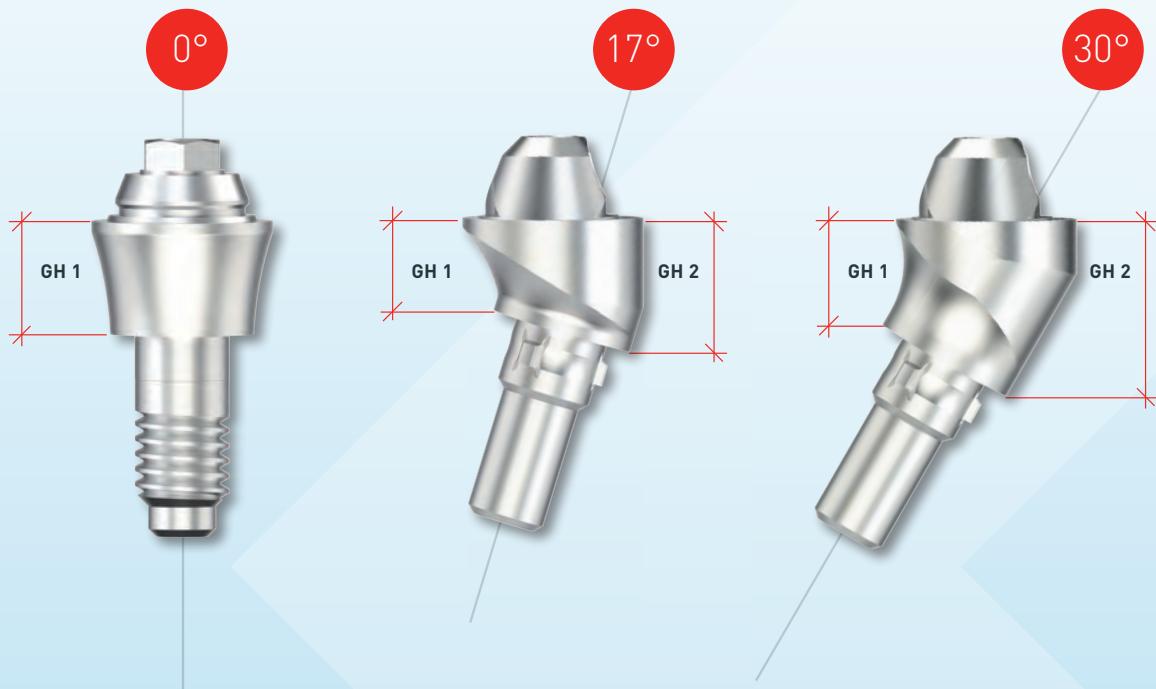

The Optiloc matrix allows small movements of the denture without decoupling the restoration. Unlike other matrix systems, however, the Optiloc always returns to the initial position.

>> Determination of the gingiva height <<

Please note the different gingiva heights. In our catalogue you will find two dimensions. The first measure shows the GH1 in the diagram. The second measure is GH2.

Multi-unit abutments

Novaloc abutment

>> Determination of the gingiva height in the N-series <<

All indicated gingiva heights refer to the lower edge of the implant shoulder, see figure 1.

In determining the gingival height at the upper edge of the implant shoulder, e.g. when using the Altus Gingiva Gauge, you must add the shoulder height of the implant, see Figure 2.

Shoulder height:

Implant connection RN:	0.6 mm
Implant connection WN:	0.8 mm
Implant connection NNC:	0.4 mm

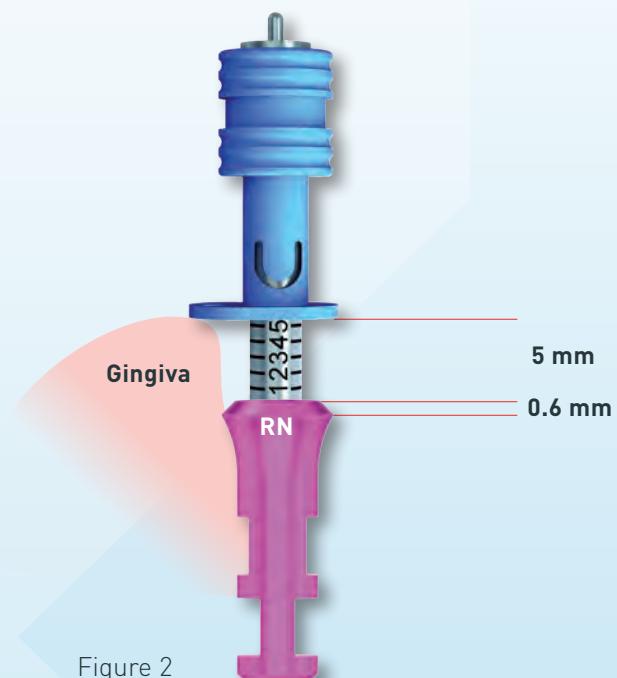

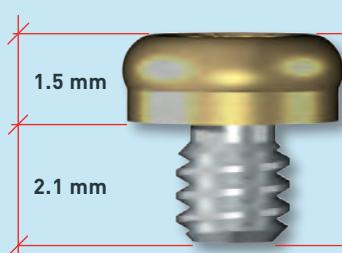

Figure 2

>> Dimensions for screw patrix <<

The screw patrices (M 2.0 thread) can be used to fix prostheses with Novaloc and Optiloc matrices on CADCAM-produced bars.

>> Multi-unit divergency compensation <<

The Multi-unit abutments have a uniform platform to the prosthetic components with a conicity of 21° (one-sided). When using the 30° angled Multi-unit abutments divergencies of up to 102° between implants can be covered. This results out of the 30° angulation of the multi-unit abutments and the conicity of the platform of 21°.

>> Multi-unit scanbody angled <<

The Scanbody 8513 is used exclusively for intraoral scanning in conjunction with angled Multi-unit abutments. For example, if an implant in the upper jaw have been inserted in the anterior region with a strong vestibular inclination, it is necessary to transfer this inclination when producing a print model. This is possible because of the indexed scanbody. Otherwise the CAD analog would stick out of the model.
